Inote="Organ: Eye; Vector: pCMVSPORT6; Post-mortem iris tissue was pooled from 10 individuals ranging in age from the years and RNA was extracted. From this pooled sample an aliquot of 60ug of total RNA yielded 2.17ug of mRNA. A directionally cloned cDNA library in the pCMVSPORT6 vector was constructed at Life Technologies, essentially following the protocols of the SuperScript Plasmid System full details of which are contained in the manufacturer's instruction manual (http://www.lifetech.com/). First [57-pgACTAGTTCTAGATCGCGACGCCCC(T)15-3']. Not 1/blunt and inserts were cloned into the Not 1/EcoR V sites in the vector. EST analysis was performed on the unamplified library at the NIH Intramural Sequencing Center (NISC)." This is the 5' sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKF2); Email 8. Wiemann@Akfz-heidelberg.de;
sequenced by GBF (National Research Centre for Biotechnology Ltd.,
Braunschweig/Germany) within the cDNA sequencing consortium of the
German Genome Project.
No sl sequence available.
This clone (DKFZp686Al695) is available at the RZPD in Berlin.
                                                                                                                                                                                                                                                                                                        240

18t strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1160

Not I/blunt end inserts were cloned into the Not I/EcoR V sites in the vector. EST analysis was performed on the unamplified library at the NIH Incramural Sequencing Center (NISC)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /mote="Organ: Bye; Vector: pCMVSPORT6; Post-mortem iris tissue was pooled from 10 individuals ranging in age from 4-80 years and RNA was extracted. From this pooled sample an aliquot of 600 of total RNA yielded 2.17ug of mRNA. A directionally cloned cDNA library in the pCMVSPORT6 vector was constructed at Life Technologies, essentially following the protocols of the SuperScrip plasmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not 1

/note="Vector: Express 1; Total and poly A+ RNA was isolated from the indicated stickleback tissue, and a cDNA library was constructed in the Express 1 plasmid vector by Open Biosystems. First strand cDNA synthesis was primed with an 54 bp linker primer containing an oligodT sequence preceded by a synthetic Not1 site (first strand primer: 5. GACTAGTTGAAACGCGCGCGCCC(T/25-3'). Following second strand synthesis, cDNAs were made blunt at the end corresponding to the original 5 prime end of mRNA, and cloned directionally into the Not1 and EcoRV sites of Express 1. Note that the EcoRV site is typically destroyed in the blunt end cloning, leaving a junction of the form 'xxxATC' (where is ATC is the second half of the EcoRV site, and xxx is derived from the cDNA sequence). A map of the Express 1 vector is available at:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      http://www.openbiosystems.com/cdna_library_construction_fa

First strand cDNA synthesis was primed with an 54 bp linker primer containing an oligod's sequence preceeded by a synthetic Nor! site (first strand primer: 5'-GACTAGTTCTAGATCGCAGCGCCCC(T) 25-3'). Following second strand synthesis, CDNAS were made blunt at the end corresponding to the original 5 prime end of mARNA, and cloned directionally into the NoI and ECORV sites of Express 1. Note that the ECORV site is typically destroyed in the blunt end cloning, leaving a junction of the form 'xxxATC' (where is ATC is the second half of the ECORV site, and xxx is desirved from the CDNA sequence). A map of the Express 1 vector is available at:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              http://www.openbiosystems.com/cdna_library_construction_fa

1st strand cDNA was primed with a Not1.oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMYSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies. a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                           1397 TGAACAATTACTCCCATTCCTAAACTTGTGCAAAAGCGAGTTCGGACTTGGTATGAATATA 1456

                                                                                          /note="Vectors Express 1; Total and poly A+ RNA was isolated from the indicated stickleback tissue, and a CDNA library was constructed in the Express 1 plasmid vector by Open Biosystems. First strand cDNA synthesis was primed with an 54 bp linker primer containing an oligodT sequence preceeded by a synthetic Not1 site (first strand primer: 5.-CACTACTTCTACATCGCAGCGCCCCCC (175-3:). Following second strand synthesis, CDNAs were made blunt at the end corresponding to the original 5 prime end of mRNA, and cloned directionally into the Not1 and EccRV sites of Express 1. Note that the EccRV site is typically destroyed in the blunt end cloning, leaving a junction of the form 'xxxaTC' (where is ATC is the second half of the EccRV site, and xxx is desired from the cDNA sequence). A map of the Express 1 vector is available at:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1037 ACAAAGCATATATCTACAGAGTTATTCGAACAACTGGATACTTGCTGTTTATTCTGCACA 1096

Sequence 205286, Application US/09949016

Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REPRENEUE: CLOOD 1307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-14
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-20
PRIOR PILING DATE: 2000-10-03
PRIOR PILING DATE: 2000-10-03
PRIOR PILING DATE: 2000-10-03
PRIOR PILING DATE: 2000-10-03
SPIOR APPLICATION NUMBER: 60/237,768
PRIOR FILING DATE: 2000-10-03
SPIOR APPLICATION NUMBER: 60/231,498
PRIOR PILING DATE: 2000-10-09-08
NUMBER OF SEQ ID NOS: 207012
SOFTHAME: PRESECT FOR WINDOWS Version 4.0
SEQ ID NO 205286
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CGTCAATCACTCATTATCAGCATGGCTCCTTCTGCTGAGGGCGGAGAAGAGGTTCTTACT 2400

Sequence 17420, Application US/09949016
; Sequence 17420, Application US/09949016
; Patent NO. 681239
; GENERAL INFORMATION:
    APPLICANT: VENTER, J. Craig et al.
    TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
; TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
; CURRENT APPLICATION NUMBER: US/09/949,016
; CURRENT FILING DATE: 2000-04-14
; PRIOR APPLICATION NUMBER: 60/241,755
; PRIOR APPLICATION NUMBER: 60/231,768
; PRIOR APPLICATION NUMBER: 60/231,498
; PRIOR FILING DATE: 2000-00-03
; PRIOR FILING DATE: 2000-09-08
; NUMBER OF SEO ID NOS: 207012
